

# HIT-HY 170 INJECTION MORTAR

**Product Technical Datasheet**  
**Steel-to-concrete**  
Update: Jan 25

# HIT-HY 170 injection mortar

Anchor design (EN 1992-4) / Rods, Sleeves and Rebar / Concrete

## Injection mortar system

Hilti HIT-HY 170

500 ml foil pack  
(also available as  
330 ml foil pack)

Anchor rod: M8-M24  
HAS,  
HAS HDG,  
HAS A4,  
HAS-U,  
HAS-U HDG,  
HAS-U A4,  
HAS-U HCR

Internally threaded  
sleeve:  
HIS-N  
HIS-RN  
(M8-M16)

Rebar (Ø8 - Ø25)

## Benefits

- Suitable for non-cracked and cracked concrete C 20/25 to C 50/60.
- Suitable for dry and water saturated concrete.
- Small edge distance and anchor spacing possible.
- High corrosion / corrosion resistant.
- In service temperature range up to 80°C short term / 50°C long term.

## Application condition

### Base material

Concrete  
(non-cracked)

Concrete  
(cracked)

### Load conditions

Static/  
quasi-static

Seismic,  
ETA-C2

### Installation conditions

Hammer  
drilled holes

Hollow drill-  
bit drilling

### Other information

Hilti  
Technical  
Data

## Linked Approvals/Certificates and Instructions for use.

### Approvals/certificates

| Approval no.                                | Application / loading condition   | Authority / Laboratory | Date of issue |
|---|-----------------------------------|------------------------|---------------|
| <a href="#">ETA-19/0465</a><br>(HAS, HAS-U) | Static and quasi-static / Seismic | DIBt, Berlin           | 10-09-2024    |
| <a href="#">ETA-14/0457</a><br>HIS-(R)N     | Static and quasi-static           | DIBt, Berlin           | 14-12-2017    |

|   |                            |                             |                         |                             |

## Fastener special dimensions

### Mechanical properties and dimensions HAS and HAS-U

Mechanical properties and dimensions of the threaded rods are standardized and can be taken from the ETA listed in the table Approvals / Certificates.

### Mechanical properties and dimensions HIS-N and HIS-RN

Mechanical properties of the internal threaded sleeve can be taken from the ETA listed in the table Approvals / Certificates.

#### Dimensions for HIS-N and HIS-RN

| Anchor size                         |       |      | M8   | M10   | M12   | M16   |
|-------------------------------------|-------|------|------|-------|-------|-------|
| Diameter of element                 | d     | [mm] | 12,5 | 16,5  | 20,5  | 25,4  |
| Length of element                   | L     | [mm] | 90   | 110   | 125   | 170   |
| Thread engagement length; min - max | $h_s$ | [mm] | 8-20 | 10-25 | 12-30 | 16-40 |

### Mechanical properties and dimensions rebar

Mechanical properties and dimensions of the rebars B500 B are standardized

#### Material quality

| Part  | Material  |
|-------|---|
| Rebar | Bars and de-coiled rods class B or C according to NDP or NCL of EN 1992-1-1 |

### Mechanical properties and dimensions filling washer for use with standard nut

Mechanical properties of the filling washer can be taken from the ETA's listed in the table Approvals / Certificates.

#### Dimensions filling washer

| Anchor size                                   |          | M12 | M16 |
|---|----------|-----|-----|
| Diameter                                      | $d_{vs}$ | 44  | 52  |
| Height of filling washer                      | $h_{vs}$ | 5   | 6   |
| Height of filling washer and spherical washer | $h_{fs}$ | 10  | 11  |

**Static and quasi-static loading based on ETA-19/0465, ETA-14/0457 , Hilti technical data and Design according to EN 1992-4**

**All data in this section applies to:**

- Correct setting (see setting instruction)
- No edge distance and spacing influence (see setting detail tables with characteristic distances)
- Base material thickness as specified in the table
- Hammer drilled holes
- hammer drilled holes with Hilti hollow drill bit (TE-CD, TE-YD)-Applicable for anchor rod
- Embedment depth, as specified in the table
- Concrete C20/25
- Design values of the bond strength for a working life of 50 Years
- Anchor material, as specified in the tables of this section (HIS-N with screw grade 8.8 and HIS-RN with screw grade 70)
- In-service temperature range I:  
(max. long term temperature +24 °C and max. short term temperature +40 °C)
- The following data are valid for short term loading with a  $\psi_{\text{sus}} = 1$   
For long term loading apply  $\psi_{\text{sus}}$  acc. to EN 1992-4 with  $\psi_{\text{sus}}^0$  value take from relevant ETA
- Recommended loads: with overall partial safety factor for action  $\gamma = 1,4$

**Embedment depth and base material thickness**

| Anchor size             |                      | M8  | M10 | M12 | M16 | M20 | M24 |
|-------------------------|----------------------|-----|-----|-----|-----|-----|-----|
| <b>HAS, HAS-U</b>       |                      |     |     |     |     |     |     |
| Embedment depth         | $h_{\text{ef}}$ [mm] | 80  | 90  | 110 | 125 | 170 | 210 |
| Base material thickness | $h$ [mm]             | 110 | 120 | 140 | 160 | 220 | 270 |
| <b>HIS-N</b>            |                      |     |     |     |     |     |     |
| Embedment depth         | $h_{\text{ef}}$ [mm] | 90  | 110 | 125 | 170 | -   | -   |
| Base material thickness | $h$ [mm]             | 120 | 150 | 170 | 230 | -   | -   |

**Embedment depth and base material thickness**

**Seismic loading based on ETA-19/465 and design according to EN 1992-4**

**All data in this section applies to:**

- Correct setting (see setting instruction)
- No edge distance and spacing influence (see setting detail tables with characteristic distances)
- Base material thickness as specified in the table
- Hammer drilled holes, hammer drilled holes with Hilti hollow drill bit (TE-CD, TE-YD)
- Embedment depth, as specified in the table
- Concrete C20/25
- Design values of the bond strength for a working life of 50 Years
- Anchor material, as specified in the tables of this section
- In-service temperature range I: -40 °C to +40 °C
- (max. long term temperature +24 °C and max. short term temperature +40 °C)
- $\alpha_{\text{gap}} = 1,0$  (using Hilti seismic filling set) or  $\alpha_{\text{gap}} = 0,5$  (without using Hilti seismic filling set) accordingly

**Embedment depth and base material thickness for seismic C2**

## Setting information

### Installation temperature range

-5 °C to +40°C

### In service temperature range

Hilti HIT-HY 170 injection mortar with anchor rod may be applied in the temperature ranges given below. An elevated base material temperature leads to a reduction of the design bond resistance.

| Temperature range    | Base material temperature | Maximum long term base material temperature | Maximum short term base material temperature |
|----------------------|---------------------------|---|--|
| Temperature range I  | -40 °C to +40 °C          | +24 °C                                      | +40 °C                                       |
| Temperature range II | -40 °C to +80 °C          | +50 °C                                      | +80 °C                                       |

### Maximum short term base material temperature

Short-term elevated base material temperatures are those that occur over brief intervals, e.g. as a result of diurnal cycling.

### Maximum long term base material temperature

Long-term elevated base material temperatures are roughly constant over significant periods of time.

### Curing and working time <sup>a)</sup>

| Temperature of the base material <sup>b)</sup> | Maximum working time | Minimum curing time <sup>a)</sup> |
|--|----------------------|-----------------------------------|
| $T_{BM}$                                       | $t_{work}$           | $t_{cure}$                        |
| -5 °C to 0 °C <sup>c)</sup>                    | 10 min               | 12 h                              |
| >0 °C to 5 °C                                  | 10 min               | 5 h                               |
| >5 °C to 10 °C                                 | 8 min                | 2,5 h                             |
| >10°C to 20 °C                                 | 5 min                | 1,5 h                             |
| >20 °C to 30 °C                                | 3 min                | 45 min                            |
| >30 °C to 40 °C                                | 2 min                | 30 min                            |

a) The curing time data are valid for dry base material only. In wet base material the curing times must be doubled.

b) The minimum temperature of the injection mortar Hilti HIT-HY 170 during installation is + 5 °C

### Setting details for HAS, HAS-U

| Anchor size  |                    |      | M8   | M10 | M12 | M16              | M20 | M24 |
|--|--------------------|------|--|-----|-----|------------------|-----|-----|
| Nominal diameter of drill bit                                  | $d_0$              | [mm] | 10   | 12  | 14  | 18               | 22  | 28  |

| Minimum spacing  | $s_{min}$          | [mm] | 40   | 50  | 60  | 75               | 90  | 115 |
| Minimum edge distance  | $c_{min}$          | [mm] | 40   | 45  | 45  | 50               | 55  | 60  |
| Characteristic distances                                       |                    |      |  |     |     |                  |     |     |
| spacing for splitting failure                                  | $s_{cr,sp}$        | [mm] | $2 c_{cr,sp}$                                      |     |     |                  |     |     |
| edge distance for splitting failure <sup>c)</sup>              | $c_{cr,sp}$        | [mm] | $1,0 \cdot h_{ef}$ for $h / h_{ef} \geq 2,00$      |     |     |                  |     |     |
|  |                    |      | $4,6 h_{ef} - 1,8 h$ for $2,00 > h / h_{ef} > 1,3$ |     |     |                  |     |     |
|  |                    |      | $2,26 h_{ef}$ for $h / h_{ef} \leq 1,3$            |     |     |                  |     |     |
|  |                    |      |  |     |     |                  |     |     |
| spacing for concrete cone failure                              | $s_{cr,N}$         | [mm] | $2 c_{cr,sp}$                                      |     |     |                  |     |     |
| edge distance for concrete cone failure <sup>d)</sup>          | $c_{cr,N}$         | [mm] | $1,5 h_{ef}$                                       |     |     |                  |     |     |

For spacing (edge distance) smaller than characteristic spacing (characteristic edge distance) the design loads must be reduced.

- a)  $h_{ef,min} \leq h_{ef} \leq h_{ef,max}$  ( $h_{ef}$ : embedment depth)
- b) Maximum recommended torque moment to avoid splitting failure during instalation with minimum spacing and edge distance
- c)  $h$ : base material thickness ( $h \geq h_{min}$ )
- d) The characteristic edge distance for concrete cone failure depends on the embedment depth  $h_{ef}$  and the design bond resistance. The simplified formula given in this table is on the safe side.

### Setting details for HIS-(R)N

| Anchor size   |             |      | M8                   | M10   | M12                          | M16   |
|---|-------------|------|----------------------|-------|------------------------------|-------|

| Spacing for splitting failure                               | $s_{cr,sp}$              | [mm] | $2 c_{cr,sp}$                                |                       |                                     |     |                  |     |     |     |     |     |  |
| Edge distance for splitting failure <sup>b)</sup>           | $c_{cr,sp}$              | [mm] | $1,0 \cdot h_{ef}$                           |                       | for $h / h_{ef} \geq 2,0$           |     |                  |     |     |     |     |     |  |
|   |                          |      | $4,6 h_{ef} - 1,8 h$                         |                       | for $2,0 > h / h_{ef} > 1,3$        |     |                  |     |     |     |     |     |  |
|   |                          |      | $2,26 h_{ef}$                                |                       | for $h / h_{ef} \leq 1,3$           |     |                  |     |     |     |     |     |  |
| Spacing for concrete cone failure                           | $s_{cr,N}$               | [mm] | $2 c_{cr,N}$                                 |                       |                                     |     |                  |     |     |     |     |     |  |
| Edge distance for concrete cone failure <sup>c)</sup>       | $c_{cr,N}$               | [mm] | $1,5 h_{ef}$                                 |                       |                                     |     |                  |     |     |     |     |     |  |

For spacing (edge distance) smaller than characteristic spacing (characteristic edge distance) the design loads must be reduced.

a)  $h_{ef,min} \leq h_{ef} \leq h_{ef,max}$  ( $h_{ef}$ : embedment depth)

b)  $h$ : base material thickness ( $h \geq h_{min}$ )

c) The characteristic edge distance for concrete cone failure depends on the embedment depth  $h_{ef}$  and the design bond resistance. The simplified formula given in this table is on the safe side.

**Drilling and Installation equipment**

**For detailed setting information on installation see instructions for use given with the product.**
